Phase I Environmental Site Assessment

Environmental Investigations Report Number: 1657.1

Dietrick McGinnis, PE, PhD, CEM
Environmental Professional

Loren Secor, CEM
Environmental Professional

Site Location

Campo Abandoned Sand Mine
Campo CA, 91906

Report Date

February 19, 2026

Site Visit Dates

October 23, 2025
December 11, 2025

Prepared For

Campo Band of Diegueño Mission Indians

Campo Environmental Protection Agency (CEPA)
36190 Church Rd, Suite #4

Prepared By

McGinnis & Associates
314 Vassar Street
Reno, Nevada 89502

List of Common Acronyms

AUL	Activity and Use Limitations
CERCLA	Comprehensive Environmental Response, Compensation and Liability Act of 1980 (as amended, 42 U.S.C. §9601 *et seq*.)
CERCLIS	Comprehensive Environmental Response, Compensation and Liability Information System (maintained by EPA)
CFR	Code of Federal Regulations
CORRACTS	Facilities subject to Corrective Action under RCRA
EPA	United States Environmental Protection Agency
EPCRA	Emergency Planning and Community Right to Know Act ((also known as SARA Title III), 42 U.S.C. §§11001-11050 *et seq*.)
ERNS	Emergency Response Notification System
ESA	Environmental Site Assessment (different than environmental compliance audit)
FOIA	U.S. Freedom of Information Act (5 U.S.C. §552 as amended by Public Law No. 104-231, 110 Stat.)
FR	Federal Register
ICs	Institutional Controls
LLP	Landowner Liability Protections under the *Brownfields Amendments*
LUST	Leaking Underground Storage Tank
MSDS	Material Safety Data Sheet
NCP	National Contingency Plan
NFRAP	Former CERCLIS sites where no further remedial action is planned under CERCLA
NPDES	National Pollutant Discharge Elimination System
NPL	National Priorities List
PCBs	Polychlorinated Biphenyls
PRP	Potentially Responsible Party (pursuant to CERCLA 42 U.S.C. §9607(a))
RCRA	Resource Conservation and Recovery Act (as amended, 42 U.S.C.§§6901 *et seq*.)
SARA	Superfund Amendments and Reauthorization Act 1986 (amendment to CERCLA)
TSDF	Hazardous waste treatment, storage, or disposal facility
USC	United States Code
USGS	United States Geological Survey
UST	Underground Storage Tank

Glossary of Terms

Adjoining property: An adjoining property is any real property whose boundary is contiguous or partially contiguous with the Site, or would be except for a street, road, or other public thoroughfare. Adjoining parcels are distinguished from adjacent parcels, which may be nearby but do not directly border the Site.

All Appropriate Inquiries (AAI): Refers to the investigation of a property's prior ownership and uses, conducted in accordance with good commercial or customary practice as defined in CERCLA, 42 USC § 9601(35)(B). Performing AAI helps a purchaser qualify for the innocent landowner defense to CERCLA liability, assuming all other elements of the defense are met.

Approximate minimum search distance: The area for which records must be obtained and reviewed under Section 7 of ASTM E1527-21, subject to the section limitations. This area may extend beyond the *Site* and is measured to the nearest property boundary. For this project, the approximate minimum search distances followed those specified in ASTM E1527-21.

Activity and Use Limitations (AULs): Legally enforceable restrictions placed on a property to limit exposure to contamination and to ensure safe use. AULs may restrict certain activities, such as excavation or groundwater use, and are often recorded in property deeds or environmental covenants to maintain protective measures following remediation.

Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLA): The federal law that governs the cleanup of *hazardous substance* releases and imposes liability on responsible parties for the cost of environmental response actions, including investigation, remediation, and related enforcement.

Due diligence: The evaluation of a property's environmental characteristics, typically conducted during a commercial real estate transaction, with the scope depending on the property and purpose.

Environmental lien: A legal claim or encumbrance on a property title to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products upon a property, including (but not limited to) liens imposed pursuant to CERCLA 42 USC § 9607(1) and similar state or local laws.

Environmental Professional (EP): An individual who meets ASTM E1527-21 and applicable state requirements for education, experience, and licensure of certification, and is qualified to conduct or supervise AAI and identify recognized environmental conditions at a property.

Hazardous substance: A substance defined as hazardous pursuant to CERCLA 42 USC § 9601(14), as interpreted by EPA regulations and case law, including designated hazardous substances, hazardous wastes, toxic pollutants, and imminently hazardous chemical substances. Petroleum (unless specifically listed), natural gas, and synthetic fuel gases are excluded.

Innocent landowner defense: That defense to CERCLA liability provided in 42 USC § 9601(35) and § 9607(b)(3). One of the requirements to qualify for this defense is that the party makes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice." There are additional requirements to qualify for this defense.

National Priorities List (NPL): The list compiled by EPA pursuant to CERCLA 42 USC § 9605(a)(8)(B) of property with the highest priority for cleanup pursuant to EPA's Hazard Ranking System. See (Code of Federal Regulations) 40 CFR Part 300.

Petroleum products: Substances encompassed by the petroleum exclusion to CERCLA, 42 USC § 9601(14), as interpreted by EPA and the courts, including petroleum and petroleum products such as crude oil and its fractions, provided they are not otherwise specifically listed as hazardous substances. This exclusion also includes natural gas, natural gas liquids, liquefied natural gas, and synthetic gas usable for fuel (or mixtures thereof). Petroleum fractions include distillates of crude oil such as gasoline, kerosene, and fuel oil, as defined by petroleum industry classifications.

Practically reviewable: Information that is practically reviewable is provided by the source in a manner and format that yields property-relevant information without requiring extraordinary analysis of irrelevant data and allows review for a limited geographic area.

Publicly available: Information that is publicly available means that the source of the information allows access to the information by anyone upon request.

RCRA generators: Persons or entities that produce hazardous waste as defined under the Resource Conservation and Recovery Act (RCRA) and are subject to applicable federal and state regulatory requirements governing the generation, handling, storage, and disposal of such wastes.

Reasonably ascertainable/Standard Sources: Available record information varies by source and jurisdiction. Users or environmental professionals are not required to obtain every possible record; ASTM E1527-21 specifies the standard sources that must be reviewed. This information is publicly available, obtainable within reasonable time and cost, and practically reviewable.

Recognized environmental conditions (RECs): The presence or likely presence of hazardous substances or petroleum products on a property under conditions indicating an existing release, a past release, or a material threat of a release into structures, soil, groundwater, or surface water. RECs include substances even if handled in compliance with laws, but do not include de minimus conditions that generally pose no material risk to public health or the environment and would not typically trigger regulatory enforcement.

Reliance: An environmental professional may rely on provided information and is not required to verify it unless they know or reasonably recognize it as incorrect based on other data obtained during the Phase I Environmental Site Assessment.

Site visit: The visit to the property during which observations are made constituting the site reconnaissance section of ASTM E1527-21.

Subject Property/Site A property(s) identified by an Assessor's Parcel Number (APN) that lies within the area studied.

Visually and/or physically observed: During a site visit, observations are made by visual inspection and sense of smell, particularly noting the presence or absence of noxious or foul odors.

Environmental Site Assessment Summary

The purpose of this Phase I Environmental Site Assessment (ESA) was to identify recognized environmental conditions for approximately 68 acres of Campo Tribal property known as the Abandoned Sand Mine (the "Site"), on the Campo Reservation along BIA Rd 10 (Church Rd).

Recognized environmental conditions (RECs), per ASTM E1527-21, indicate the likely presence of hazardous substances or petroleum products that could pose a release risk to structures, soil, or groundwater. This Phase I ESA was conducted using all appropriate inquiries into the Site's past ownership and activities to identify historical or potential environmental concerns that could affect redevelopment or reuse of the property.

McGinnis and Associates conducted site visits on October 23, 2025, and December 11, 2025, including inspections of the Site on-foot and by vehicle, as well as drone mapping to document terrain and identify potential waste materials. In addition, a review of surrounding areas within the applicable minimum search distances, as defined in ASTM E1527-21, was performed to identify any past or present regulatory concerns that could potentially affect the Site.

Observations from the Site reconnaissance and historic records identified the following RECs:

- **REC 1:** Two abandoned aboveground storage tanks with unknown contents and use are located near the Site entrance. Several weathered drums were also observed nearby with evidence of spillage. Historic records indicate that the mine routinely handled petroleum products, including the blending of hydrocarbon solvents and oils. Based on these findings, impacts to soil and the potential impacts to groundwater cannot be ruled out.

- **REC 2:** A large concrete washout area was observed on bare soil, with evidence of surface migration from extensive accumulation. Based on these conditions, impacts to soil and the potential for groundwater impacts cannot be ruled out.

- **REC 3:** Multiple large piles of discarded asphalt and road materials of unknown age and origin were observed directly on bare ground. Several of these piles were also noted to be in close proximity to a production well. Based on the unknown source and unmanaged placement, impacts to soil and the potential for groundwater impacts cannot be ruled out.

Further investigation is recommended to confirm the presence or absence of hazardous materials associated with these RECs. Phase II site-specific sampling and analysis should be conducted in identified areas of concern to evaluate potential impacts to soil and groundwater. Due to the large size of the Site, extensive groundcover of industrial materials/facilities, excavated areas, and illegal dumping, the Phase II investigation may represent only an initial phase of sampling. Phase II planning should also include efforts to locate drilling logs and the Mine Plan of Operations, as well as expanded employee interviews.

1. Introduction

A Phase I Environmental Site Assessment (ESA) was performed in conformance with the American Society for Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments E1527-21 for an area of Campo Tribal land known as the Abandoned Sand Mine (Figure 1) located along BIA Rd 10 (Church Rd). Hereafter, this area of land is referred to throughout this report as the "Site".

Figure 1. The Site as seen looking north across road debris and discarded materials.

This practice establishes good commercial and customary procedures for conducting an ESA of a property, with emphasis on contaminants addressed under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) as well as petroleum products. Performing the ESA fulfills the "all appropriate inquiry" requirement, supporting landowner liability protections (LLPs) such as those available to innocent landowners, contiguous property owners, or bona fide prospective purchasers.

The ESA is intended to identify recognized environmental conditions (RECs) associated with the Site, including potential impacts to soil and groundwater, and provide a foundation for informed decision-making regarding redevelopment or reuse, particularly in the context of tribal land management and Brownfields revitalization. Figure 2 is a map of the Site using satellite imagery.

Figure 2. Map of the Site with the approximate sand mine boundary shown in yellow.

1.1. Report Purpose

The environmental findings presented in this report are intended to identify RECs associated with the Site. RECs are defined as the likely presence of any hazardous substance or petroleum products on a property under conditions that indicate an existing, past, or potential release of products into structures or into the ground or groundwater of the property.

The site assessment covers the Site and all on-site improvements, such as buildings, utilities, and stormwater features. Environmental records within a 1-mile radius were additionally reviewed and discussed. The physical setting of the Site and surrounding area was also evaluated, including the location of private and public water wells, soil types, and flood zones.

1.2. Special Terms and Conditions

A Phase I ESA is a practice that is site-specific in that it relates to assessment of environmental conditions on a specific parcel or parcels of real estate. Consequently, this practice does not address many other issues raised in transactions such as purchases of business entities, or interests therein, or of their assets, that may well involve environmental liabilities pertaining to property previously owned or operated or other offsite environmental liabilities. No ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a property. Performance of this Phase I ESA is intended to reduce, but not eliminate, uncertainty regarding the potential for RECs in connection with a Site.

Information in this Phase I ESA report is limited to data that is considered practically reviewable. This includes data from source agencies where the information is provided in a manner and in a form that, upon examination, yields information relevant to the property without the need for extraordinary analysis of irrelevant data. Public records are considered practically reviewable if records can be obtained from the source agency by location references, such as address, parcel number, or zip code. If records are not readily available based on a location reference, they are not considered practically reviewable.

This Phase I ESA is intended for use by parties who wish to assess the environmental condition of commercial real estate. Use of this practice is intended to constitute appropriate inquiry for purposes of innocent landowner defense provided under CERCLA. Appropriate inquiry does not mean an exhaustive assessment of a clean property is warranted. This report certifies that the findings and conclusions were developed in accordance with ASTM Practice E1527-21, which represents good commercial and customary practice for conducting Phase I ESAs to identify RECs. As with any Phase I ESA, the findings and conclusions are subject to the inherent limitations of the methodologies described in the ASTM standard practice.

1.3. Use by Third Parties

This report was prepared pursuant to the contract between the environmental professionals (EP) of McGinnis and Associates, and the client on the cover page (“prepared for”). That contractual relationship included an exchange of information about the project area that was unique between the EP and client and is the basis upon which this report was prepared. Because of the importance of communication between the EP and client, reliance or any use of this report by anyone other than the party, for whom it was prepared, is prohibited and, therefore, not foreseeable by the EP.

Reliance or use by any other third party without the explicit authorization in the report does not make said third party a third-party beneficiary to the EP's contract with the client. Any such unauthorized reliance on or use of this report, including any of its information or conclusions, will be at the third party's risk. For the same reasons, no warranties, or representatives expressed or implied in this report, are made to any third party.

2. Information Sources and Methodology

The methodology used to perform the site assessment for the Site adheres to ASTM guidelines "Standard Practice for Environmental Site Assessments; Phase I Environmental Site Assessment Process," designation E1527-21. A review of environmental regulatory database records was conducted to identify environmental records for the Site and surrounding area. The Site was identified and described based on APN and street addresses. Site improvements were also considered in this assessment if buildings and other structures existed on the parcel(s).

Sections 3 through 5 of this report provide background information and general assessment data that is applicable to the Site and surrounding area. Section 3 consists of information such as land uses, ownership, historic Sanborn Fire Insurance Maps, along with the site visit and observations. Section 4 includes information on the physical setting of the Site and surrounding area including groundwater conditions, soil types, and water well locations. Table 1 provides a general summary of information sources that were used by the EP to gather data for these sections.

Table 1. Sources used by the EP for the Environmental Site Assessment.

Information Source	Comments
Environmental Data Resources (EDR)	Review of federal, state, and local environmental databases within 1 mile of the Site
Historical Records	Includes historic aerial photographs, Sanborn Fire Insurance Maps, and city directory records
Government and Planning Documents	USGS topo maps, FEMA floodplain maps, zoning and land use maps, soil surveys, and water well logs
Mine Safety and Health Administration (MSHA)	Database containing information on mine ownership, operations, violations, and enforcement actions

2.1. EDR Regulatory Database Records

A search of available environmental database records was done by the private firm Environmental Data Resources (EDR). The resulting information satisfies the search requirements of EPA's *Standards and Practices for All Appropriate Inquiries* (40 CFR Part 312) and ASTM E1527-21.

The regulatory database records listed in Table 2 were found to contain at least 1 record per database within the applicable search radius. A comprehensive list of individual records and more detailed information is available in Attachment C (EDR Radius Report).

Table 2. Agency databases with records found on and within 1 mile of the Site.

Record Type	Environmental Record	Number	Distance
Standard Environmental Records	SWF/LF	1	< 0.5 mi
Additional Environment Records	HAULERS	1	On-site
	INDIAN RESERV	1	On-site
	US MINES	1	< 0.25 mi
	ABANDONED MINES	1	< 0.25 mi
	FINDS	2	On-site
	ECHO	1	On-site
	E-MANIFEST	2	< 0.25 mi
	HAZNET	1	On-site
Total Records			11

The following bulleted list describes the regulatory agency databases with records found by the EDR radius search and how many individual records from each database are located near the Site. Figure 3 is a map of these records found within a 1-mile radius of the Site.

- SWF/LF: A federal database that tracks solid waste facilities (SWF) and landfills (LF), including their locations, permits, operating status, and types of waste managed.
- HAULERS: A federal dataset tracking companies and vehicles that transport hazardous waste, including their permits, compliance status, and reported waste shipments.
- INDIAN RESERV: This map layer portrays Indian administered lands of the United States that have any area equal to or greater than 640 acres.
- US MINES: Mines Master Index File. The source of this database is the Dept. of Labor, Mine Safety and Health Administration. A review of this database, as provided by EDR, revealed 1 record within 0.25 miles of the Site.
- ABANDONED MINES: The Office of Surface Mining Reclamation and Enforcement (OSMRE) keeps an inventory of lands and waters affected by past mining, documenting impact type, extent, location, and reclamation costs. A review of this database, as provided by EDR, and dated 09/10/2025, revealed 1 record within 0.25 miles of the Site.
- FINDS: Facility Index System. FINDS contains both facility information and pointers to other sources that contain more detail.
- ECHO: Enforcement and Compliance History Online – EPA's database providing public access to facility compliance and enforcement information.

- E MANIFEST: An EPA electronic system for tracking hazardous waste shipments that modernizes the nation's cradle-to-grave oversight. A review of this database, as provided by EDR, and dated 06/02/2025, revealed 2 records within 0.25 miles of the Site.
- HAZNET: Hazardous Waste Network – tracks hazardous waste generation and handling.

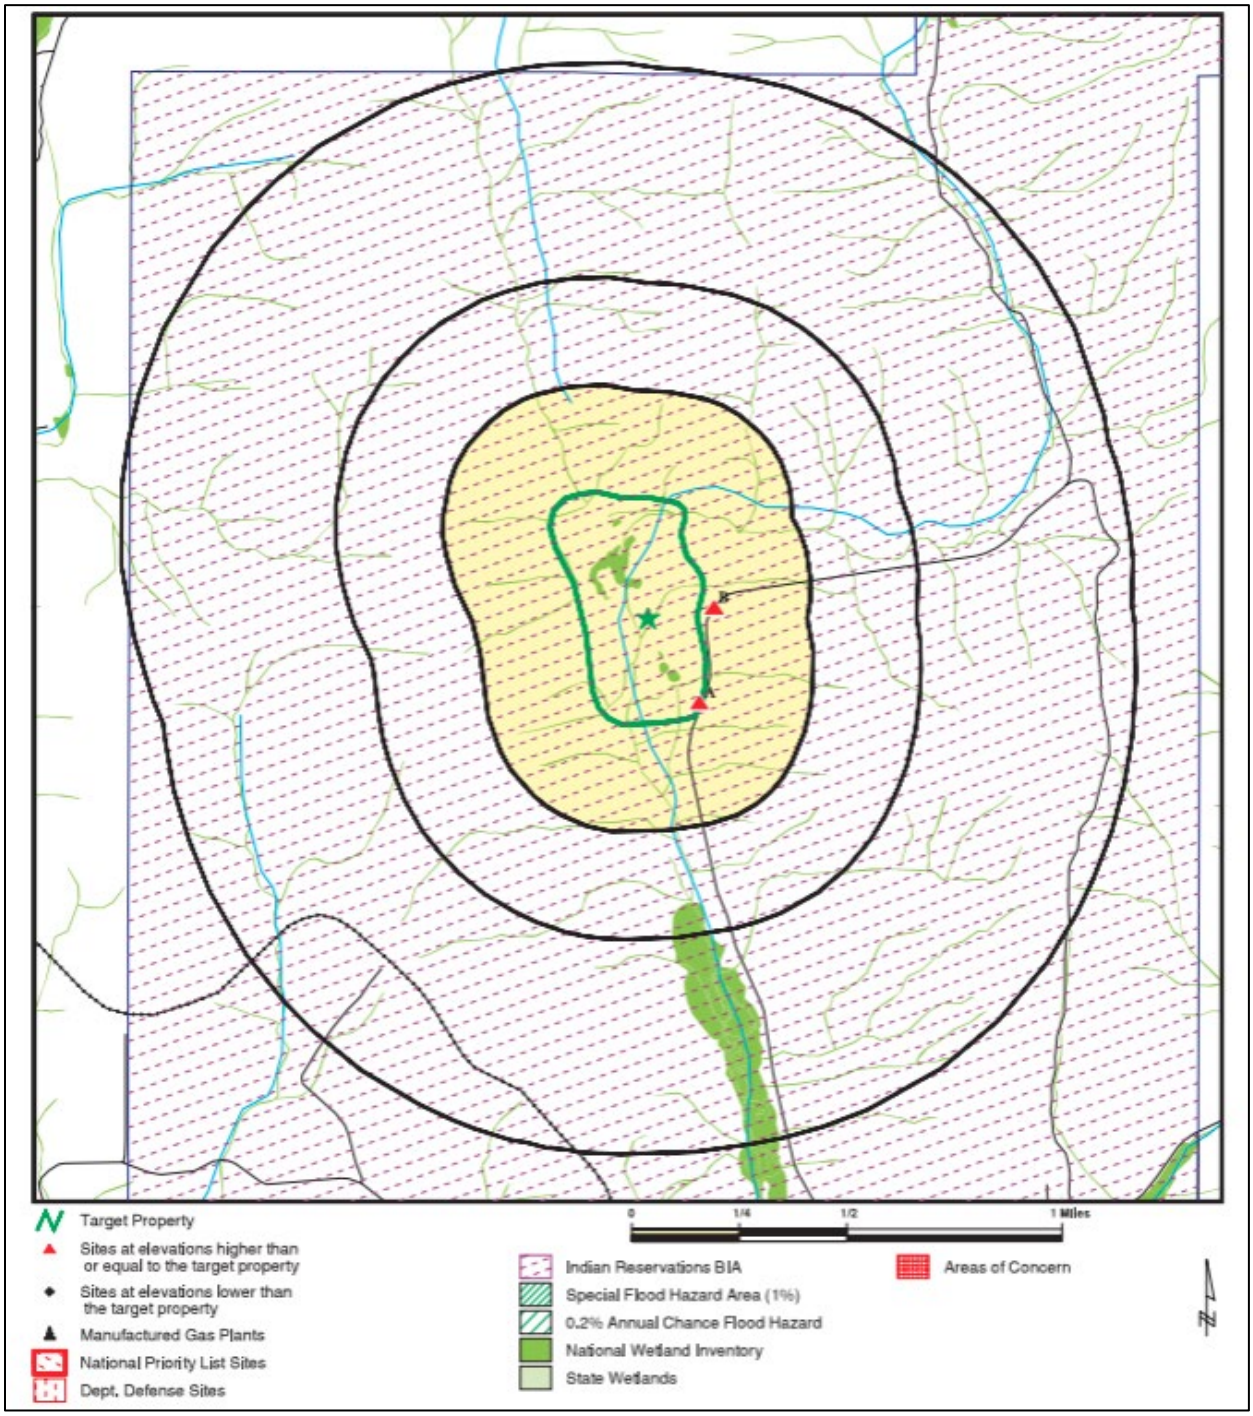

Figure 3. Map of environmental database records found within 1 mile of the Site.

2.2 Discussion of Database Records

Address documentation for the Site and surrounding region is limited, in part because the Site is located on a federally recognized Indian Reservation, where conventional addressing systems are not consistently used. As a result, some addresses from the EDR records have been omitted from the discussion below, as they may not match precise physical locations.

Environmental records found within 1 mile of the Site are provided in Attachment C.

Onsite Records

US Mines/Abandoned Mines: Available records indicate that on-site mining operations by Campo Materials Company (CMC) were permanently ceased between late 2017 and early 2019. From 1990 to 2017, the facility received multiple citations and violations. An indeterminate quantity of hazardous materials was also reportedly handled on-site.

A preliminary ESA of the region, conducted for the Campo Wind Project by Dudek (McMahon & Herschberger, 2019), stated that CMC engaged in fuel blending of large quantities of hydrocarbon solvents and waste and mixed oils prior to energy recovery at another location. These activities indicate the historical use of petroleum products at the site. The handling of petroleum and other hydrocarbon products was considered indicative of a potential or past release to the environment and was identified as a REC in the preliminary ESA.

The extent of operations and specific hazardous material storage areas on the property have not been fully determined; however, two aboveground storage tanks (ASTs) and what appears to be a storage pad for drums and other containers were identified near the Site entrance by aerial imagery and the site reconnaissance. These findings are further discussed in Section 3 of this report.

Between 2004 and 2017, the Mine Safety and Health Administration (MSHA) issued multiple violations related to CMC mine operations. Most were 104(a) citations, which indicate an unspecified violation of a standard, regulation, or section of the Mine Act. One violation was notably a 104 (g)(1) citation, which indicates the withdrawal of an untrained miner from the mine (Mine Safety and Health Administration, 2025).

Surrounding Records

The EDR search additionally identified several environmental records from the surrounding area:

Campo Reservation – Indian Health Clinic (36350 Church Rd) – listed in the ECHO and FINDS databases for regulatory tracking, likely associated with a permitted wastewater disposal system. The facility is also listed in the E-Manifest database for the handling of certain hazardous wastes (flammables and waste medicine). The transporter for these wastes appears to have historically been Stericycle Specialty Waste Solutions Inc.

Campo Reservation (unspecified location) – listed in the HAZNET database for the storage, bulking, and/or transfer off-site of 14 tons of "other inorganic solid waste" that occurred in 2006. Global Transloading and Copper Mountain Landfill are the listed transporter names.

Old Campo Iron/Uranium Removal Plant (IX) (unspecified location) – listed in the ECHO and FINDS databases for regulatory tracking. Limited records indicate a historic violation of SDWA Radionuclides and Revised Rad Rule on 3/31/2025. No current violations were identified.

Overall, these records from the surrounding area are related to regulatory tracking mechanisms and do not indicate releases or contamination that would affect the Site.

2.3 Databases Searched with No Results

The databases listed within Table 3 below did not yield any additional records within the ASTM-specified search distances for the Site. This indicates that no further regulatory or environmental concerns were identified by EDR from these sources.

Table 3. Agency databases with no records found within 1 mile of the Site.

Record Type	Environmental Record
Standard Environmental Records	Federal NPL List: NPL, Proposed NPL, NPL LIENS, Delisted NPL
	Federal CERCLIST List: Federal Facility, SEMS, SEMS-ARCHIVE
	RCRA List: CORRACTS
	RCRA non-CORRACTS TSD Facilities: RCRA-TSDF

EDR High Risk Historical Records	EDR Exclusive Records: EDR MGP, EDR HIST Auto, EDR Hist Cleaner
EDR Recovered Government Archives	Exclusive Recovered Government Archives: RGA LF, RGA LUST

3. Site Description and Historical Use

The Site is a historic sand mine encompassing approximately 68 acres on the Campo Indian Reservation in southeastern San Diego County. Mining operations were conducted as a tribally owned enterprise under Muht Hei, Inc., the Campo Band of the Kumeyaay Nation's development corporation. Public records identify the operation under several name variations, including Campo Materials Company (CMC), Campo Materials Corporation, and Campo Materials.

The mine extracted unconsolidated sand and gravel from the Campo Valley floor using open-pit surface mining methods, with materials screened and processed onsite for road base, concrete aggregate, and local construction supply. Mine operations lasted from about 1990 through 2019, and MSHA records list a mine ownership date of November 26, 1990. MSHA records additionally indicate that the mine was intermittently operational from at least 2016 onward, if not earlier.

Aerial imagery dating back to 1949 (Attachment B) shows that the Site was originally an alluvial valley that remained undeveloped until at least 1985. Subsequent aerial imagery from 1989 shows initial grading and earth-moving activities, while imagery from 1994 to at least 2014 shows active mining at the Site. MSHA records indicate that CMC's activities ceased sometime between late 2017 and early 2019, although an exact date of closure could not be determined. No ownership records were located, and minimal documentation may exist. Attachment E contains limited historic city directory records found by EDR along BIA Rd 10 (Church Rd).

A search on GeoTracker, the California Water Boards' data management system for sites that have the potential to impact water quality, found no records on or near the Site. The GeoTracker website includes data for sites that require cleanup, leaking underground storage tank (LUST) sites, cleanup program sites, irrigated lands, oil and gas production, operating permitted underground storage tanks (USTs) and land disposal sites.

3.1. Interviews and Local Knowledge

During site reconnaissance, a Campo Tribal member and former CMC employee was interviewed in person regarding Site history, with discussion focused around on-site wells. The previous employee, who worked at the mine in the early 2000s, stated that numerous monitoring wells were present across the Site, along with a large-diameter production well near the southern portion of the Site. According to the interviewee, the production well supplied water for mining operations, including wetting materials for dust control and post-extraction processing.

The monitoring wells and production wells that were located during the site reconnaissance are discussed further in Section 4.3.

The interviews were useful for developing this Phase I, but additional interviews are recommended for interpreting results of the recommended Phase II investigation. Due to the large size of the Site and extensive ground coverage of both industrial materials and illegal dumping, the Phase II investigation may represent only an initial phase of sampling activities.

3.2. Data Gaps and Limitations

Several data gaps were identified, including uncertainty regarding the exact operational timeline of the mine, the specific processing activities conducted at the Site (a mine plan of operations was not available to review for this Phase I), and the details surrounding individual mine violations.

The nature of MSHA 104(a) citations does not specify the underlying violations, which limits insight into the compliance issues experienced at the Site. In addition, the origin and handling history of the construction debris observed onsite are unknown, limiting the ability to fully evaluate potential sources of contamination. This includes any unpermitted use of the Site beyond mining activity and monitoring well data.

Overall, these data gaps and limitations did not impact McGinnis and Associate's ability to identify surface-level RECs, but additional RECs may become apparent as debris is removed and more information from sampling and interviews becomes available. It is also important to note that this Phase I ESA does not determine whether observed materials are associated with permitted activities or unpermitted disposal; illegal dumping was notable.

The site reconnaissance identified five wells; however, no associated well logs were found in available state databases. Based on well markings and regional knowledge, Mike Thing Well Drilling and Pump Service is considered the likely driller of the on-site wells, although this could not be confirmed. The company was contacted for this report but did not respond.

3.3. Review of Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were reviewed to obtain additional historical information on the Site. The Sanborn Library includes fire insurance maps from Sanborn, Bromley, Perris & Browne, Barlow, and other sources documenting historical property use in approximately 12,000 U.S. cities in towns. As shown in Attachment A, no Sanborn map records covering the Site were found.

3.4. Site Reconnaissance and Observations

A site visit was conducted by McGinnis and Associates on October 23, 2025, with a follow-up site visit conducted December 11, 2025. These site visits included inspection of the Site on-foot and by vehicle, as well as drone mapping to highlight Site terrain and the extent of waste materials.

Since the mine's closure, the Site has experienced widespread illegal dumping, primarily of white goods, tires, and other domestic solid waste. Aerial imagery suggests illegal dumping escalated after 2022, although there is evidence of accumulation as far back as 2014 when the mine was still operational. The Campo Environmental Protection Agency (CEPA) notably conducted cleanups between 2019 and 2022 that removed large quantities of waste, but dumping continued.

Abandoned mining equipment remains onsite, including a large separator with multiple conveyor belts, a weigh scale, a medium wheel loader, and a dump truck. The dumped waste and abandoned mining equipment were not identified as RECs because no hazardous substances or petroleum products under conditions indicative of a release to soil or groundwater were seen in these areas during site inspection. The waste observed was primarily municipal solid waste, and no obvious

associated soil staining was seen in the high resolution drone imagery. As mentioned above, what is not in view or under the piles, may constitute additional RECs beyond the scope of this study.

Two abandoned structures are located near the mine entrance: one likely served as an office space, and the other for storing large equipment (Figure 4). Between the structures, are two unlabeled aboveground storage tanks that likely contained fuel (potentially diesel or gasoline) for the mining equipment and operator vehicles. It is unknown if the tanks were emptied prior to mine closure or if residual fuel remains. Historic aerial imagery indicates that an additional storage tank of similar size appears to have been located on a nearby concrete pad until at least mid-2019 (Figure 5).

Several unlabeled and weathered drums on a concrete pad near the mine entrance showed significant staining on the pad and adjacent soil, indicating potential releases of waste oils and/or other hydrocarbon containing fluids. The presence of this staining, along with the unknown contents and condition of the aboveground storage tanks, is considered a REC due to the potential for soil and groundwater contamination.

Approximately 850 feet north of the mine entrance, is a roughly 0.5-acre area suspected to have been used for concrete washout. This determination is based on the presence of distinct light-gray fines that appear to have flowed downslope prior to hardening (Figure 6). The area is adjacent to a dirt access road, suggesting vehicles had consistently accessed the location and discharged residual concrete and wash water down the slope (Figure 7). Historic aerial imagery indicates this activity has occurred for an extended period, with the washout area visible since at least 2014. Concrete washout materials are highly alkaline and can contain heavy metals; therefore, historical washout activities may have resulted in elevated soil pH and localized impacts to surface soils and drainage pathways. Due to these potential environmental impacts, this area is identified as a REC.

Multiple piles of apparent road materials and crushed asphalt are present at the Site, including several large piles located near the historic production well (Figure 8). An additional large pile is located near the abandoned mining equipment at the center of the Site (Figure 9). Close-up photos of the material indicate that it is crushed asphalt and road base as evident by the dark and angular aggregate, asphalt binder fragments, and heterogeneous composition (Figure 10).

The purpose for placing these materials at the Site is unknown; however, historic aerial imagery indicates they were placed between 2014 and 2018. Their age, origin, and handling history are unknown, and the materials are in direct contact with bare soil. Asphalt and roadway materials may contain petroleum-related constituents, including polycyclic aromatic hydrocarbons (PAHs), and metals such as lead associated with historical vehicle emissions from the leaded gasoline era that can persist in pavement fines. As a result, these materials represent a potential pathway for PAHs and other contaminants to impact soil and groundwater and are identified as a REC.

Given the extent of debris and excavations at the Site, additional RECs may be identified during material removal and management activities.

Figure 4. The Site entrance showing abandoned buildings, fuel tanks, and several drums.

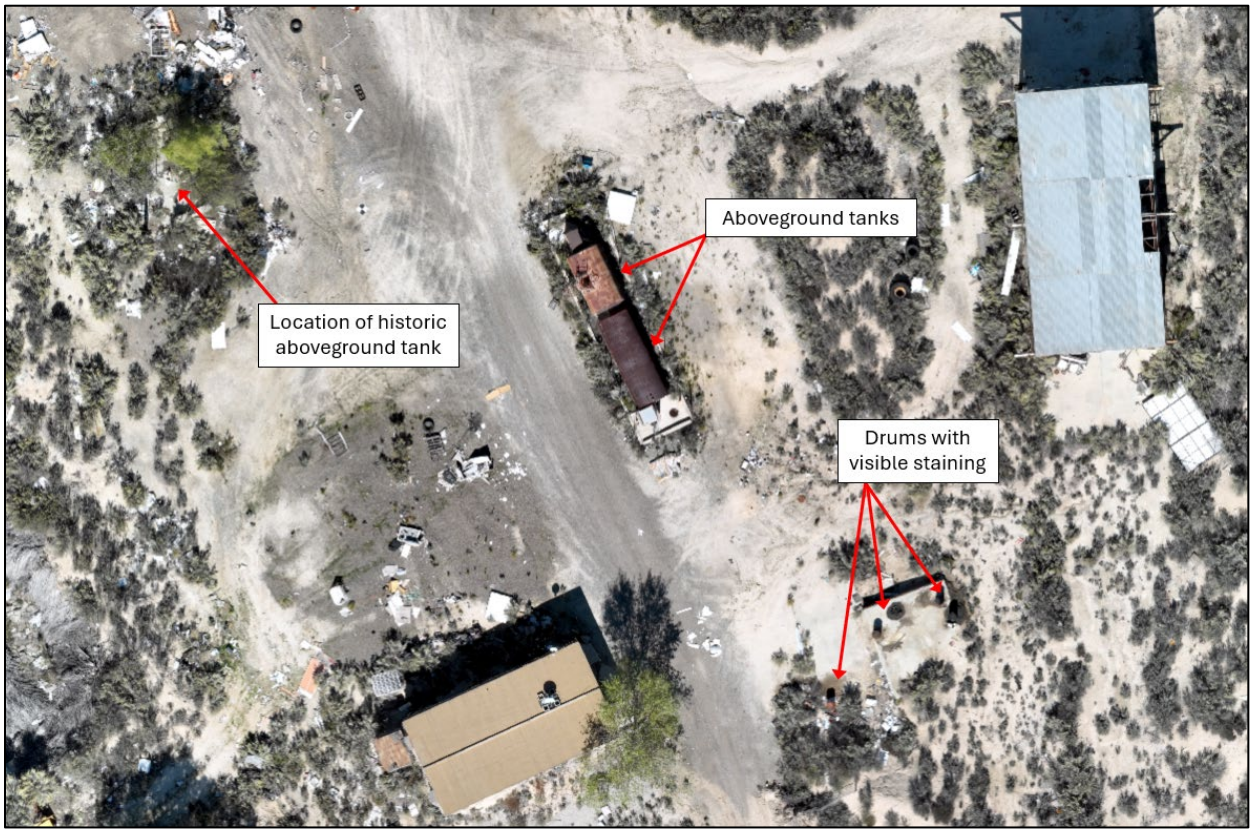

Figure 5. Drone imagery of the Site entrance noting areas of historic hydrocarbon storage.

Figure 6. Suspected concrete washout along an access road at the east side of the Site.

Figure 7. Drone imagery of the concrete washout area. Note the access road to the right.

Figure 8. Asphalt piles and road materials of unknown age near the Site production well.

Figure 9. Large pile of crushed asphalt material. Note the equipment in the background.

Figure 10. Detail of crushed asphalt material showing apparent binder-coated particles.

4. Physical Setting and Environmental Findings

This section summarizes the physical characteristics of the Site and surrounding area, such as hydrology, flood zones, and soils. It also discusses water wells on and near the Site, including multiple wells identified during the site reconnaissance that were not listed in the EDR databases.

4.1. Geology and Hydrology

The site lies on the floor of Campo Valley at an approximate elevation of 3,400 feet above mean sea level. The region is part of the Peninsular Ranges, characterized by a complex system of faults and uplifted mountain ranges. The surrounding landscape consists of low-relief alluvial plains bounded by crystalline bedrock highlands. Vegetation is dominated by chaparral and sparse riparian scrub growing along ephemeral washes. The area has a semi-arid Mediterranean climate with average annual precipitation of roughly 12–14 inches, concentrated during winter storms and isolated summer monsoonal events.

Campo Valley is underlain by Quaternary alluvial and colluvial deposits derived from weathering and erosion of the surrounding Peninsular Range batholith. The valley fill consists primarily of coarse-grained sand, gravel, and minor silt, with variable thickness reaching several tens of feet.

These unconsolidated sediments overlie fractured and weathered granitic bedrock composed of tonalite, granodiorite, and quartz diorite. Soils mapped in the vicinity are coarse sandy loams and granitic residuum with high permeability and low water-holding capacity.

The Campo Valley Groundwater Basin (Basin 9-28), as described in California Department of Water Resources Bulletin 118, covers approximately 3,550 acres and is bounded by low-permeability crystalline rocks that limit lateral groundwater flow. Alluvial deposits across the valley form the primary aquifer system and serve as source material for sand and gravel extraction. Diabold Creek, flowing from the northeast, drains directly into the Site, along with a smaller ephemeral tributary to the north. The creek appears to flow underground in the northeast portion of the Site before resurfacing just south of the Site and continuing southward to join Campo Creek.

The lowest excavated portions of the mine fill with water seasonally, which has led to a semi-permanent pond forming near the center of the Site. Depth to groundwater is estimated at 30-70 feet based on data collected from the Site as well as surrounding water well data within 0.5 miles. The Site is not depicted with any flood hazard areas as shown by FEMA's National Flood Hazard Layer (NFHL) viewing tool, although flood hazard mapping may be incomplete in this area.

4.2. Local Soil Conditions

The U.S. Department of Agriculture's Natural Resources Conservation Service (NRCS) manages the National Conservation Soil Survey (NCSS), which collects, maintains, and distributes soil survey information for privately owned lands in the United States. Soil maps depict soil patterns across landscapes, with STATSGO maps providing generalized data derived from the more detailed SSURGO (Soil Survey Geographic Database).

SSURGO is the most detailed level of NRCS mapping, with scales ranging from 1:12,000 to 1:63,360, constructed using field mapping methods that follow national standards. These digitized soil maps support landowners, townships, and county natural resource planning.

The dominant soil composition at the Site is as follows:

- Mottsville – loamy coarse sand, Class A hydrologic group: excessively drained soil with high infiltration rates. Soils are deep with well or excessively drained sands and gravels. There is moderate corrosion potential for untreated steel. The depth to the water table is greater than 0 inches and the minimum depth to bedrock is greater than 0 inches.

- Tollhouse – gravelly coarse sandy loam, Class D hydrologic group: clayey soils with very slow infiltration rates and a high water table or that are shallow to an impervious layer. There is moderate corrosion potential for untreated steel. The depth to the water table is greater than 0 inches and the minimum depth to bedrock is greater than 5 inches.

4.3. On-site and Nearby Wells

A review of California water well databases was conducted for this investigation. Seven water wells are located within 0.5 miles of the Site, including several United States Geological Survey (USGS) wells. USGS water sites are listed in the National Water Information System (NWIS), which provides data on locations where the USGS collects surface water and groundwater information. Three historic USGS wells, located roughly 1,000 feet south of the Site, and one well approximately 2,900 feet northeast, have been inactive since 1975 and could not be located during the site reconnaissance. The original purpose of these wells is unknown.

Within a 1-mile radius of the Site, a total of 10 wells were identified (Figure 11; additional details in Attachment D). The EDR database did not list any wells present on the Site; however, the Site reconnaissance revealed numerous wells present. These include an unknown number of 2-inch diameter PVC monitoring wells with 6-inch steel outer casings, suspected to have been installed between 1980 and 1990 to monitor groundwater prior to mining operations. At least three of these wells remain on-site, with two additional monitoring wells observed in the valley to the north.

The total number of monitoring wells originally installed is unknown, and no well logs could be located for any of the on-site wells. Based on well markings and regional knowledge, Mike Thing Well Drilling and Pump Service is considered the likely driller of the on-site wells, although this could not be confirmed. The company was contacted for this report but did not respond.

One monitoring well near the north side of the Site appears partially removed, with its casing twisted and exposed roughly 10 feet above ground. It is inferred that this well eventually got in the way of mining operations and that there was an apparent attempt to pull the well casing out of the ground with a vehicle or heavy machinery.

An additional, slightly larger diameter well near the Site entrance appears to have been converted from a monitoring well to a small production well. A large-diameter production well is present near the south side of the Site but was inaccessible during the reconnaissance due to pumping equipment and a protective cap. Access would require a work-over drill rig to remove the cap and possibly the pump. Based on its location and local knowledge, this well was likely used historically to support mining operations, such as filling detention ponds and wetting extracted material.

Figure 12 shows the wells found during the Site reconnaissance, though more wells are suspected.

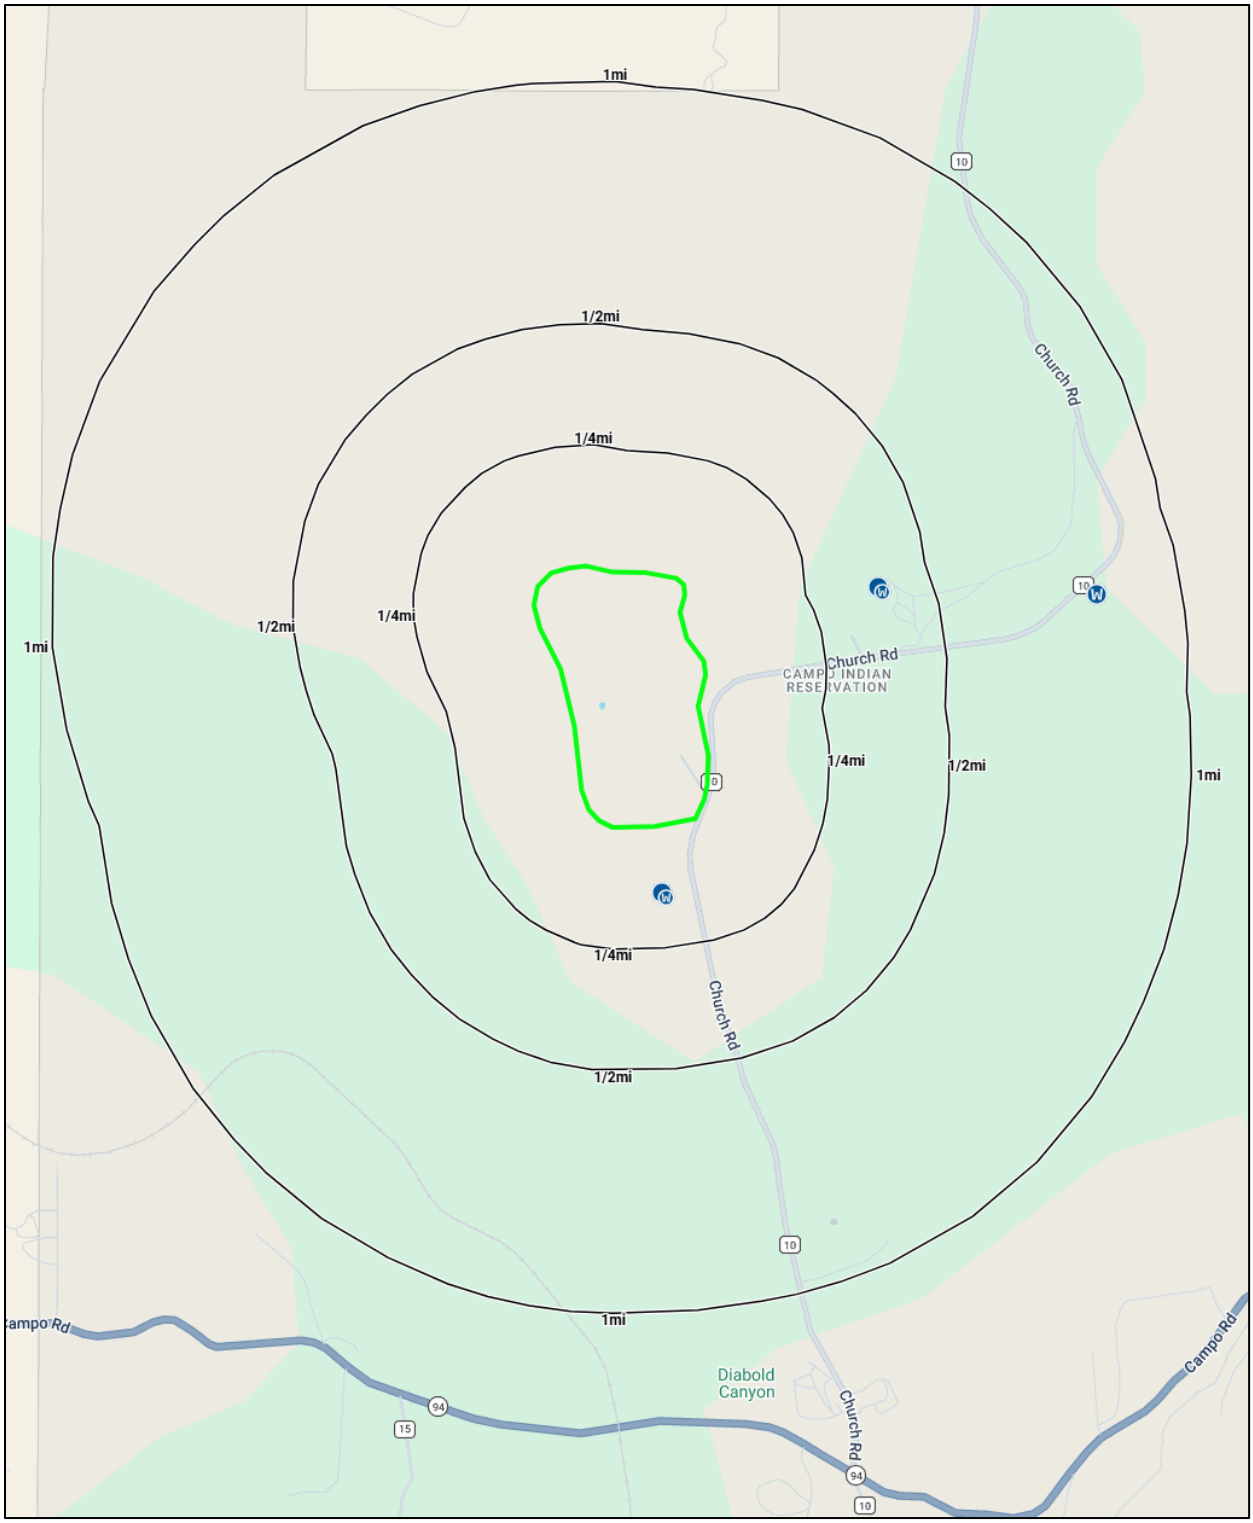

Figure 11. Water wells found by EDR within 1 mile of the Site (small blue icons).

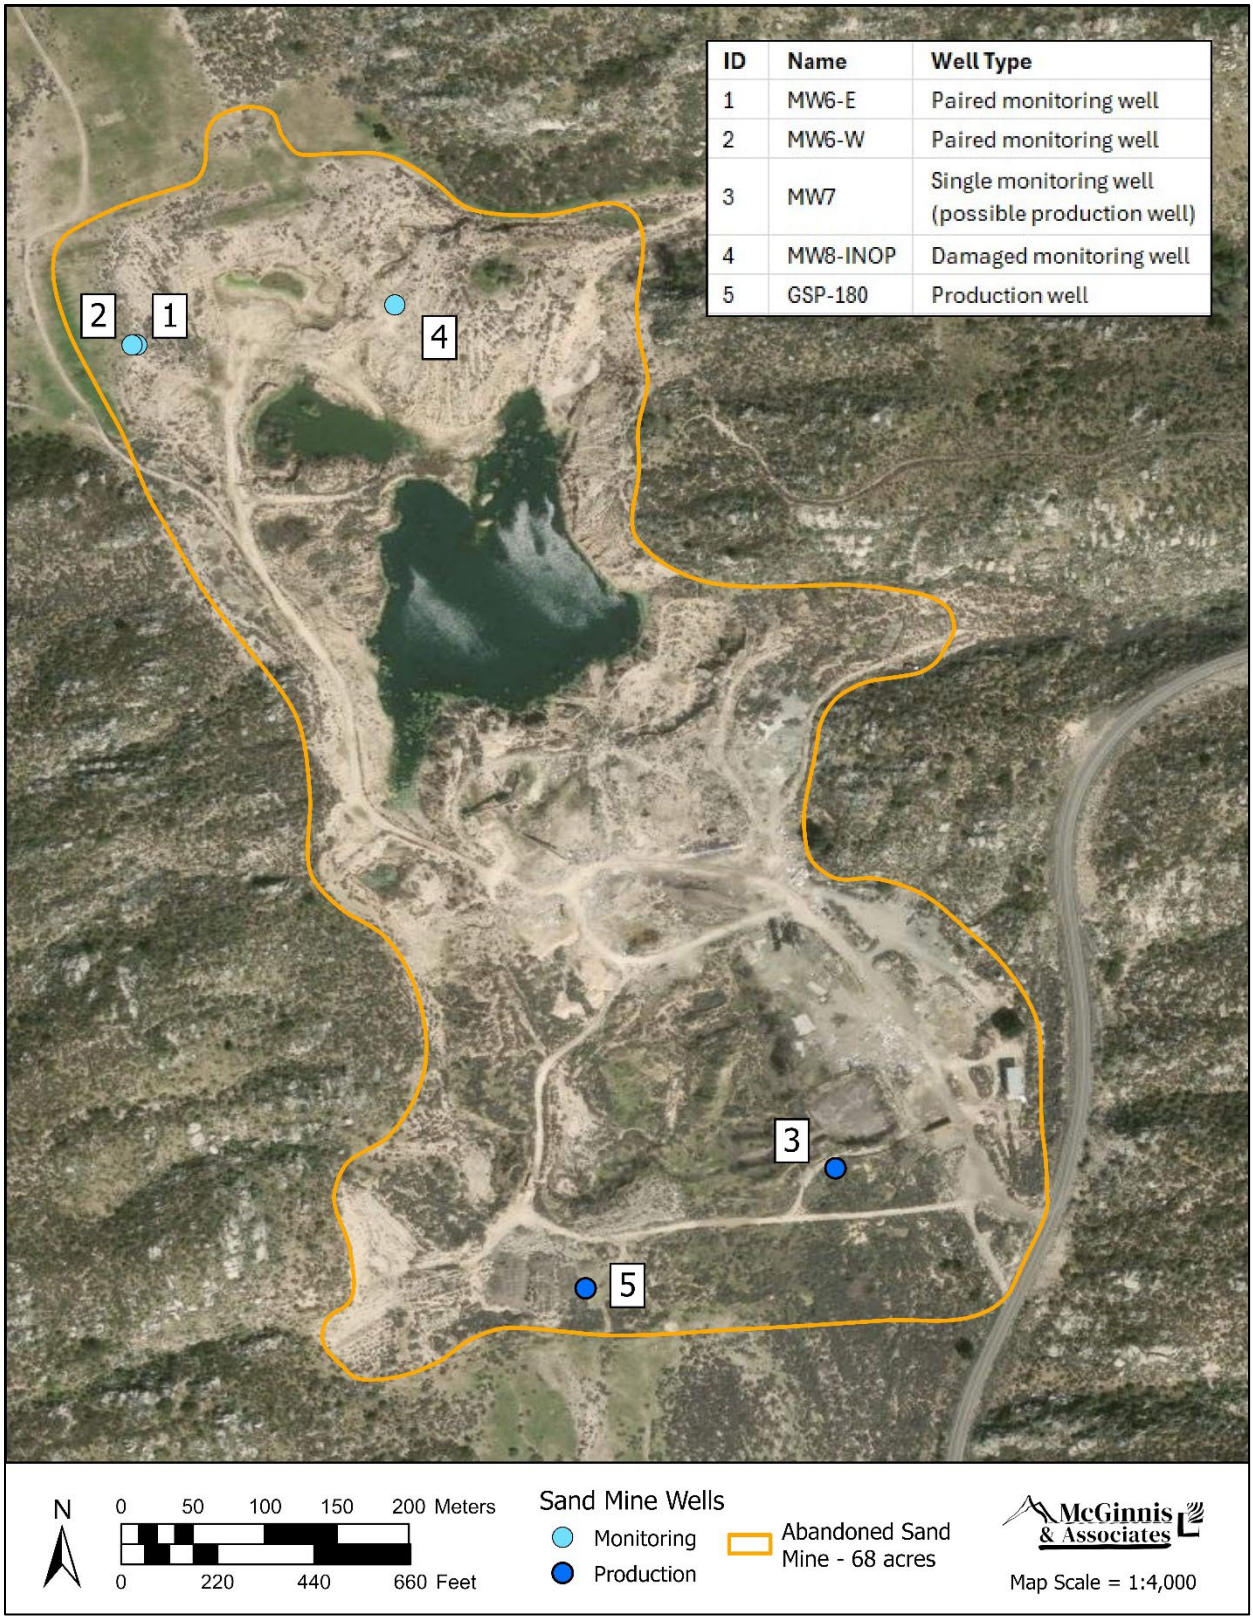

Figure 12. Monitoring and production wells found during reconnaissance of the Site.

5. Findings and Conclusions

This Phase I ESA was performed in conformance with ASTM Standard Practice E1527-21 for the area of Campo Tribal property known as the Abandoned Sand Mine (the Site).

The purpose of the assessment was to identify recognized environmental conditions (RECs) in connection with the Site. RECs are defined by ASTM E1527-21 as the likely presence of any hazardous substance or petroleum products on a property under conditions that indicate an existing, past, or material threat of the release of hazardous substances or petroleum products into structures or into the ground or groundwater of the property. This report was prepared to constitute an appropriate inquiry into the previous ownership/lessees and uses of the Site consistent with good commercial and customary practice. The information was gathered using records that were reasonably available as per ASTM E1527-21 guidelines.

McGinnis and Associates conducted site visits on October 23, 2025, and December 11, 2025, including inspections of the Site on-foot and by vehicle, as well as drone mapping to document terrain and waste materials. In addition, a review of surrounding areas within the applicable minimum search distances, as defined in ASTM E1527-21, was performed to identify any past or present regulatory concerns that could potentially affect the Site.

Observations from the Site reconnaissance and historic records identified the following RECs:

- **REC 1:** Two abandoned aboveground storage tanks with unknown contents are located near the Site entrance. Several weathered drums were also observed nearby with evidence of significant spillage. Historic records indicate that the mine routinely handled petroleum products, including the blending of hydrocarbon solvents and oils. Based on these findings, impacts to soil and the potential impacts to groundwater cannot be ruled out.

- **REC 2:** A large concrete washout area was observed on bare soil, with evidence of surface migration from years of accumulation. Based on these conditions, alkaline impacts to soil and the potential for groundwater impacts cannot be ruled out.

- **REC 3:** Multiple large piles of discarded asphalt and road materials of unknown age and origin were observed directly on bare ground. Several of these piles were also noted to be in close proximity to a production well. Based on the unknown source and unmanaged placement, impacts to soil and the potential for groundwater impacts cannot be ruled out.

Further investigation is recommended to confirm the presence or absence of hazardous materials associated with these RECs. Phase II site-specific sampling and analysis should be conducted in identified areas of concern to evaluate potential impacts to soil and groundwater. Due to the large size of the Site, extensive groundcover of industrial materials/facilities, excavated areas, and illegal dumping, the Phase II investigation may represent only an initial phase of sampling. Phase II planning should also include efforts to locate drilling logs and the Mine Plan of Operations, as well as expanded employee interviews.

6. Statement of Certifications

All findings and conclusions presented in this report have been made based upon the information gathered by the Environmental Professional and the EDR report in conformance with the guidelines set forth in ASTM E1527-21. We hereby certify that we are responsible for the services described in this document and for its preparation. The services described in this document have been provided in a manner consistent with the standards of the profession and to the best of our knowledge comply with all applicable federal, state, and local statutes, regulations, and ordinances.

We declare that, to the best of our professional knowledge and belief, we meet the definition of *Environmental Professional* as defined in §312.10 of 40 CFR § 312" and 12.13.2. Attachment F contains curriculum vitae summarizing our experience as required in E1527-21. We hold the designation of Nevada Certified Environmental Manager (CEM) and have the education, training, and experience necessary to assess sites in California. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Dietrick McGinnis, PE, PhD, CEM

NV CEM Certification Number: EM1785
Certification Expiration Date: 08/31/2027

Loren Secor, CEM

NV CEM Certification Number: EM2517
Certification Expiration Date: 05/10/2026

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 23), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

RGA LUST---------- Recovered Government Archive Leaking Underground Storage Tank

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

US MINES: Mines Master Index File. The source of this database is the Dept. of Labor, Mine Safety and Health Administration.

A review of the US MINES list, as provided by EDR, has revealed that there is 1 US MINES site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CAMPO MATERIALS COMP		***E 0 - 1/8 (0.038 mi.)***	***B7***	***21***
Database: US MINES, Date of Government Version: 08/08/2025 Database: MINES VIOLATIONS, Date of Government Version: 07/01/2025 Mine ID:: 0405015				

ABANDONED MINES: An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

A review of the ABANDONED MINES list, as provided by EDR, and dated 09/10/2025 has revealed that there is 1 ABANDONED MINES site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
CAMPO MATERIALS COMP		***E 0 - 1/8 (0.038 mi.)***	***B7***	***21***

EXECUTIVE SUMMARY

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

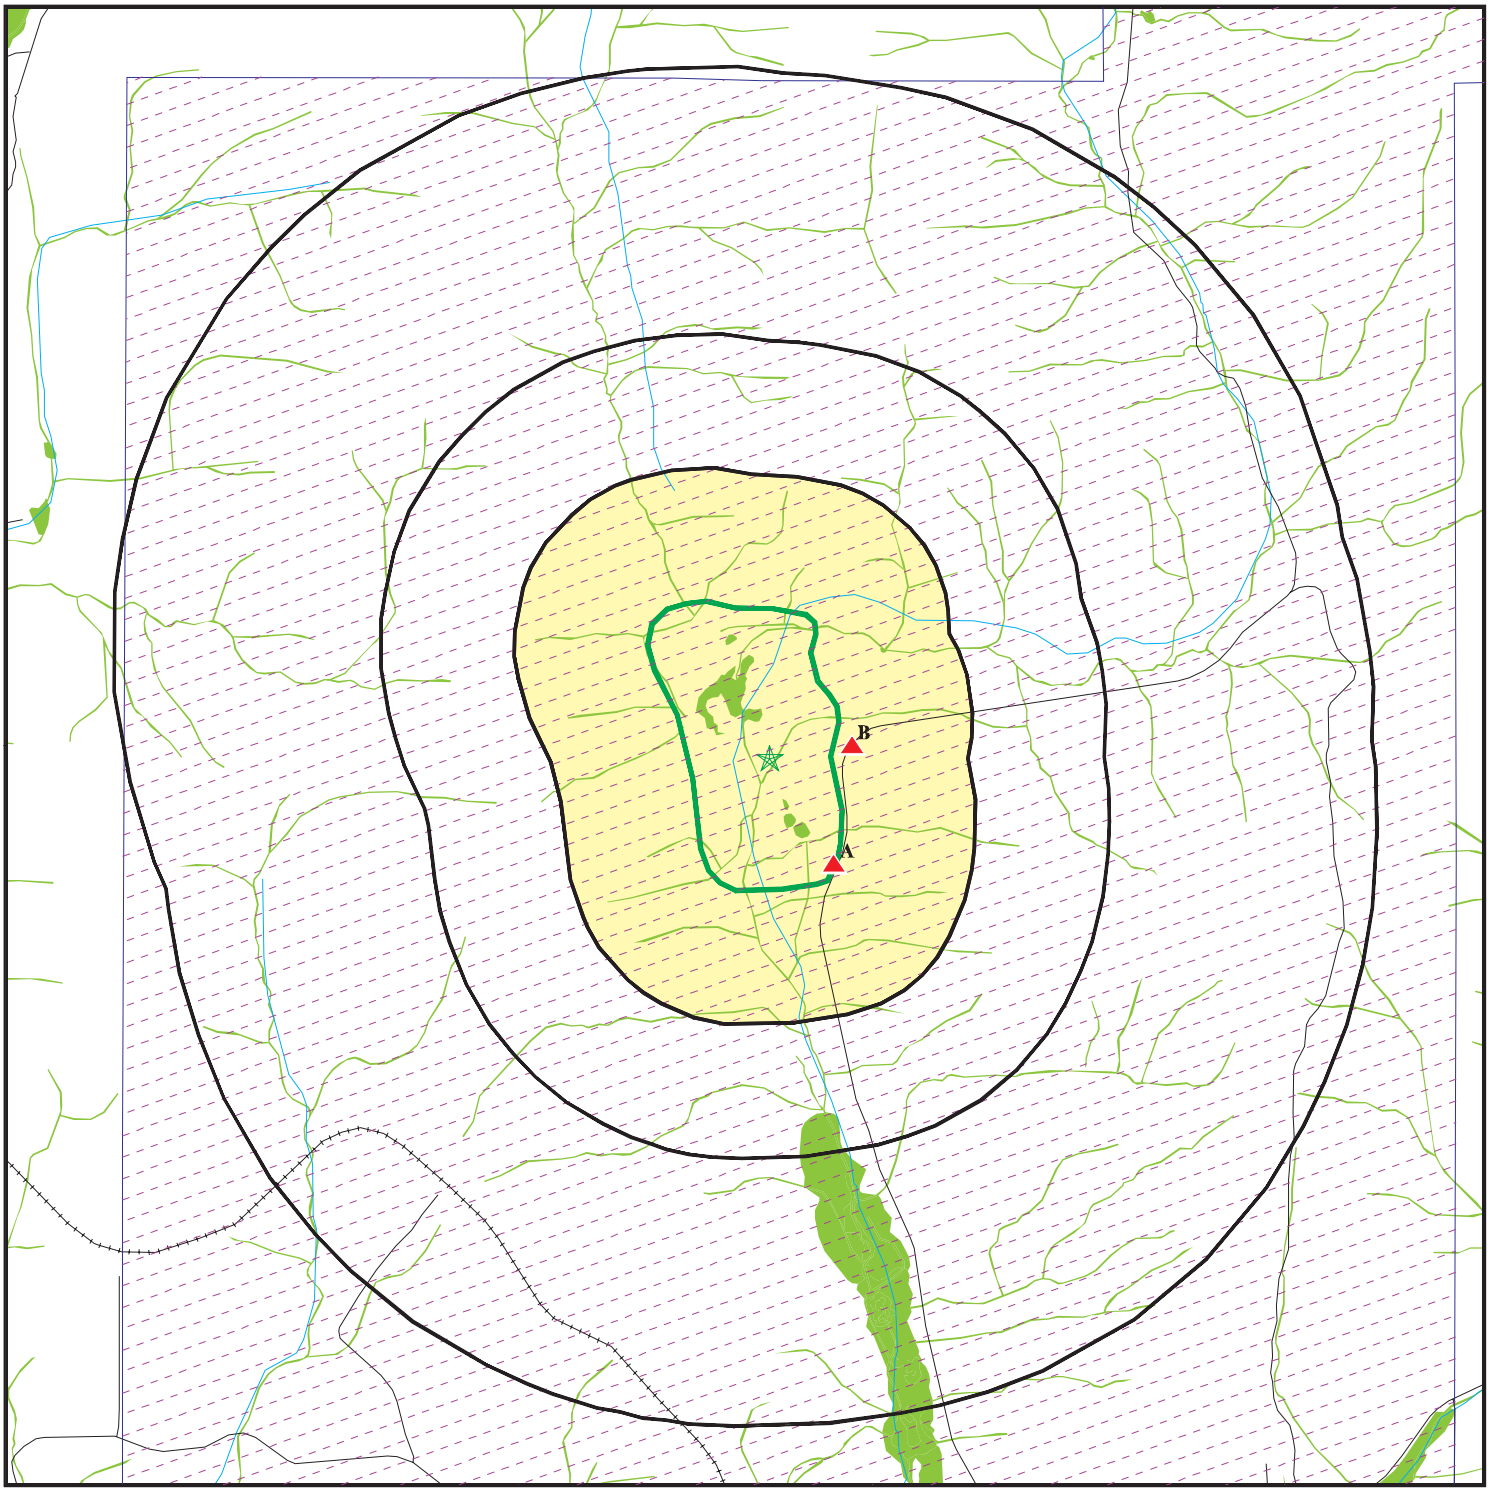

A review of the E MANIFEST list, as provided by EDR, and dated 06/02/2025 has revealed that there are 2 E MANIFEST sites within approximately 0.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

CHROME PLATING: Chrome Plating Facilities Listing

This listing represents chrome plating facilities the California State Water Resources Control Board staff identified as possibly being a source of Per- and polyfluoroalkyl substance (PFAS) contamination. Sites and locations were identified by staff with the Division of Water Quality in the California State Water Board. Data was collected from the CA Air Resources Board 2013 and 2018 - Cr VI emission survey, CA Emission Inventory, CA HAZ Waste discharge database and by reviewing storm water permits. Former chrome plating sites are also included that are open site investigation or remediation cases with the Regional Water Quality Control Boards and the Department of Toxic Substances Control.

HWT: Registered Hazardous Waste Transporter Database

A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

Date of Government Version: 06/25/2025

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region’s active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing
In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

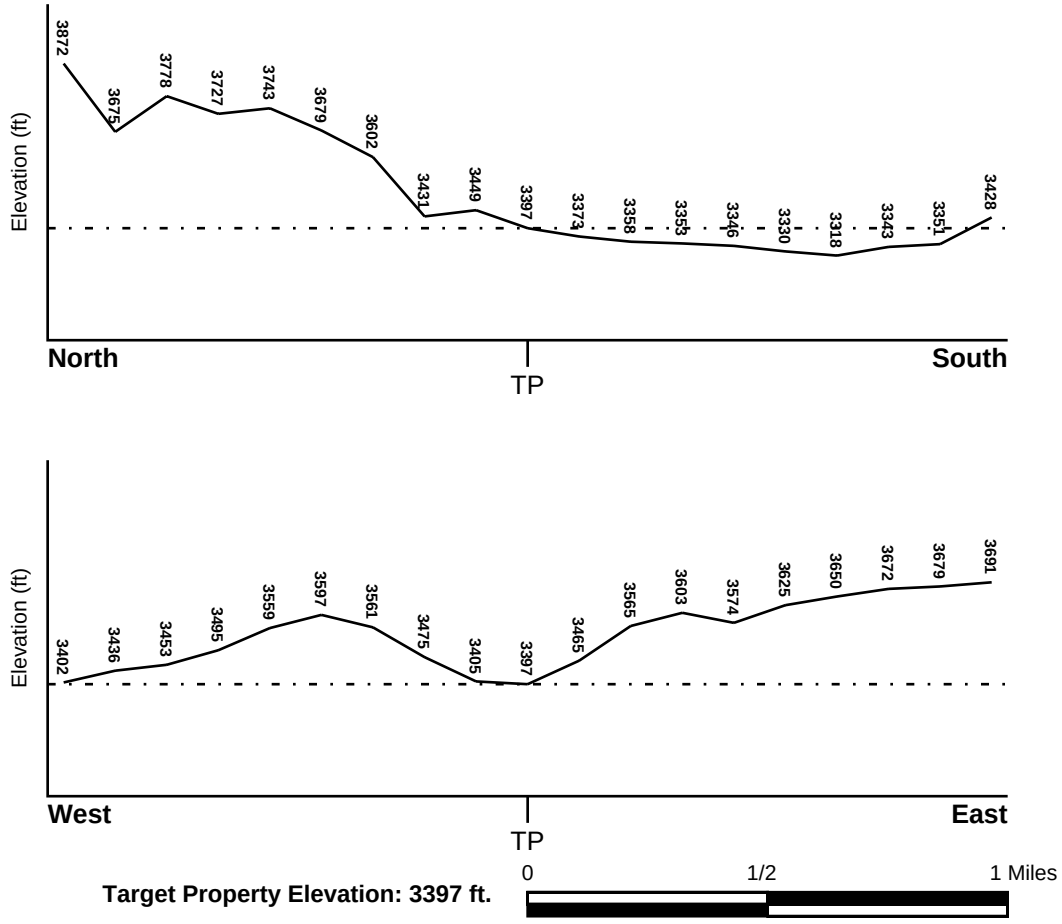

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 3397 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Not Reported	

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
LIVE OAK SPRINGS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: MOTTSVILLE

Soil Surface Texture: loamy coarse sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	loamy coarse sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6.5 Min: 6.1
2	5 inches	59 inches	stratified sand to loamy sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 6.5 Min: 6.1

Soil Map ID: 2

Soil Component Name: TOLLHOUSE

Soil Surface Texture: gravelly coarse sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 5 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	16 inches	gravelly coarse sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: Min:	Max: Min:
2	16 inches	20 inches	weathered bedrock	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	Not reported	Max: Min:	Max: Min:

Soil Map ID: 3

Soil Component Name: LOAMY ALLUVIAL LAND

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 153 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.3 Min: 6.6
2	14 inches	27 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.3 Min: 6.6
3	27 inches	59 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.3 Min: 6.6

Soil Map ID: 4

Soil Component Name: MOTTSVILLE

Soil Surface Texture: loamy coarse sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish and Wildlife
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

OTHER STATE DATABASE INFORMATION

Groundwater Ambient Monitoring & Assessment Program
State Water Resources Control Board
Telephone: 916-341-5577
The GAMA Program is Californias comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Heath Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

Geothermal Wells Listing
Department of Conservation
Telephone: 916-445-9686
Geothermal well means a well constructed to extract or return water to the ground after it has been used for heating or cooling purposes. Geothermal wells in California (except for wells on federal leases which are administered by the Bureau of Land Management) are permitted, drilled, operated, and permanently sealed and closed (plugged and abandoned) under requirements and procedures administered by the Geothermal Section of the Department of Conservations Geologic Energy Management Division (CalGEM, formerly DOGGR).

California Oil and Gas Well Locations
Source: Dept of Conservation, Geologic Energy Management Division
Telephone: 916-323-1779
Oil and Gas well locations in the state.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

California Earthquake Fault Lines
Source: California Division of Mines and Geology
The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

RADON

State Database: CA Radon
Source: Department of Public Health
Telephone: 916-210-8558
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

OTHER

Airport Landing Facilities: Private and public use landing facilities
Source: Federal Aviation Administration, 800-457-6656

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Environmental Professionals' CV

B. DIETRICK MCGINNIS, Ph.D, PE, CEM

President, McGinnis and Associates

Phone/fax (775) 853.0449 fax 0243, dmcginnis@mcginnisandassociates.com

65 Regency Way Suite C, Reno, NV 89509

Education

Ph.D. Civil Engineering. University of Nevada, Reno. 1998. Dissertation Title "Degradation of Ethylene Glycol by Dye-Sensitized and Hydroxyl Radical Oxidation". E. Joe Middlebrooks, advisor (retired).

M.S. Civil and Environmental Engineering. Utah State University. Logan, Utah. 1995. Thesis Title "Biocontainment of Hydrocarbons in a Shallow Aquifer". R. Ryan Dupont, advisor.

B.S. Wood Science and Technology. Mississippi State University. Starkville, Mississippi. 1990. Senior Thesis "Determination of Pentachlorophenol Retention by X-Ray Fluorescence Using Split Borings from Treated Southern Yellow Pine Poles".

Work Experience

President, McGinnis and Associates, LLC, Reno, NV, 1989 to present.

- Government to government relation assignments including experience with Tribal Governments, NRDA, and Superfund technical support.
- Watershed and wetland planning and restoration including infrastructure/road rehabilitation.
- Providing economic, energy and environmental program development support for Tribes and Local Governments.
- Implementing site cleanup activities including site characterization and assessment. Assignments include managing contractors and working with federal and state regulatory agencies.
- Support for monitoring programs for water, soil, biota and air including radiological and pesticide assessments and drinking water/wastewater systems.
- Design and implementation of BMPs for Non-point pollution prevention including SWPPP.

Assistant Research Professor, University of Nevada, Reno, 1998.

- Developed funding resources and research initiatives for the National Disaster Resource Center for Wood Structures, a partnership between the USDA Forest Products Laboratory, the University of Nevada, Reno, the University of North Dakota and Michigan Technological University.
- Coordinated with lobbyist from member universities for direct appropriations; an earmark successfully placed on the 1999 budget sponsored by Senators Reid and Dorgan.

Research Assistant University of Nevada, Reno, Department of Civil Engineering, (1995-1998). In addition to Ph.D. research responsibilities:

- Maintained and performed analysis on multiple ICP, high performance liquid chromatography, ion chromatography and gas chromatography units.

Research Assistant, Utah State University, Department of Civil and Environmental Engineering, Logan, Utah (1992-1994). In addition to M.S. research responsibilities:

- Maintained and performed analysis for metals on Perkin Elmer Inductively Coupled Plasma units.
- Developed methods for and performed analysis with high performance liquid chromatography, ion chromatography and gas chromatography (flame ionization and electron capture detectors) units.

Summer Internship, International Paper. Wiggins, MS, Deridder, LA, and Joplin, MO (1989).

- Development of quality control methods for PCP treated poles at multiple plants.
- Development of X-Ray Fluorescence methods for in-plant and field use.

Laboratory Technician, Mississippi State Chemical Labs, Miscellaneous Lab, Mississippi State University, Starkville, MS, March 1984 to October 1990.

- Conducted general drinking water quality and wastewater permit analyses.
- Developed procedures for food and beverage quality testing and labeling, including analyses for specific phosphorus compounds, product tampering, nutritional value and a variety of specialty analyses that involved adapting procedures from several sources.

Consulting Experience

2016-2017	Regulatory and Technical Support, Jackpile Mine in Laguna Pueblo, New Mexico. Subcontract with EA for Region 6 U.S. EPA.
2015-2017	Regulatory and Technical Support, Tronox Navajo Area Unranium Mines, San Mateo Creek Basin, New Mexico. Subcontract with Weston for Region 6 U.S. EPA.
2012-2017	CEM, Mohave Generating Plant, Laughlin, NV for Hamilton Geotech/Southern California Edison
2000-2016	Technical support for the Yerington Paiute Tribe Environmental Program. Yerington, NV. Tasks include review of work plans and data/data validation relating to the Anaconda Mine Superfund Site and participation in the Technical Working Group. (current project)
2009-2016	Caseworker for the Yerington Paiute Tribe. Yerington Mine Natural Resources Trustee Council. (current project)
2014-2016	Technical support for wetland restoration and erosion control. La Posta Rancheria, San Diego County, CA. (current project).
2015-2016	Technical support, Climate Change Planning Program for the 27 Tribes of Nevada, Inter-Tribal Council of Nevada (current project)
2016	Technical support, development of gravel resources on the Round Valley Tribes Reservation, Covello, CA. (current project)
2014-2016	Technical Advisor for the Elem Indian Colony, Sulphur Bank Mercury Mine Superfund Site. Lake County, CA.
2014-2016	Technical Advisor for the Elem Indian Colony, USFW TWG and GAP EPA programs. Lake County, CA.
2006-2016	Technical Advisor for CLLEAN under their Superfund Technical Assistance Grant (TAG) for the Lowery Landfill Superfund site. Aurora, CO. Responsibilities include review of PRP generated data describing groundwater plumes of heavy metals and chlorinated solvents including PCE in residential/commercial areas.
2007-2015	Groundwater modeling and support for water resource management. Habematolel Band of Pomo Indians. Upper Lake, CA.
2010-2014	Implementation and management of the Hitch Adaptive Management Plan. Habematolel Band of Pomo Indians. Upper Lake, CA. Funded through the U.S. FW Tribal Wildlife Program.
2011-2014	WAPA negotiation and energy development consultant, Hoopa Valley Tribe, Hoopa, CA.
2012-2013	Strategic Energy Planning program consultant, Lower Brule Sioux Tribe, Lower Brule, ND.
2012-2013	Development of a BIA IRMP. Big Sandy Rancheria, Auberry, CA.
2010-2011	Development of a Strategic Energy Plan for the Hoopa Tribe, Hoopa, CA. Included integration of Superfund Sites, Endangered Species and cultural sites into energy planning.

2009-2010	Project Manager, Linden Fields 50 MW Solar Farm development for Sunkiss Solar.
2009-2010	QAPP development and implementation of a legacy pesticide investigation, Habematolel Band of Pomo Indians. Upper Lake, CA..
2009	Development of biomass energy projects for Robinson Rancheria (subcontracted by Pacific Plains Engineering).
2008	Business development for Native Solar, an alternative energy economic development and jobs program for the Scotts Creek Band of Pomo Indians.
2007-2009	Septic system rehabilitation, Big Valley Rancheria water treatment plant. Lakeport, CA.
2007-2008	Development of DOE based Strategic Energy Plans for the 6 Tribes of Lake County CA. Robinson Rancheria, managing Tribe.
2007-2008	Evaluation and re-design of municipal wastewater treatment facilities. Big Valley Rancheria, Lakeport, CA.
2006-2007	Wetland and road/erosion repair for 319 and FEMA project support. Robinson Rancheria, Nice, CA.
2004-2011	Program development, technical support and data validation for water quality monitoring for metals and general water quality parameters, Elem Colony, Clearlake Oaks, CA, Sulphur Bank Superfund Site.
2004-2012	Technical Advisor for Clear Lake Environmental Action Network (CLEAN) under their Superfund Technical Assistance Grant (TAG) for the Sulphur Bank Mine site. Clearlake Oaks, CA.
2007-2008	Development of a DOE First Steps energy program for 5 federally recognized Tribes of Lake County.
2005-2006	Review and report on Geothermal Incorporated Landfill Site Remediation Program, Middletown Rancheria, Middletown, CA, a site that included heavy metals and chlorinated solvents.
2006	Fish Passage Reconnaissance: A discussion of fish barrier issues on Middle Creek, Lake County California, including engineering notes and observations from a site review of the Kelseyville fish ladder.
2006	Biological Assessment Robinson Rancheria Fee Lands, Robinson Rancheria Band of Pomo Indians Lake County, California.
2004-2006	Pesticide Circuit Rider Project, Lake County Tribes. Coordinated by the Big Valley Rancheria, Lakeport, CA.
2005-2006	Copper and lead program compliance in drinking water. Big Valley Public Works, Big Valley Rancheria, Lakeport, CA.
2005	Technical support for Mountain Electronics Recycling Systems including CDBG grant development. Quincy, CA.
2004	Economic analysis and technical report for Ecofirst, an electronics recycling company. Plumas County, CA.
2004	Program development and assistance for water quality, sediment and biota monitoring for metals and pesticides for Big Valley Rancheria, Lakeport, CA.
2004	Development of a Non-point source program and report for the Middletown Rancheria, Middletown, CA.
2004	Development of a water monitoring QAPP for the Robinson Rancheria, Nice, CA.
2003	Preparation of Solid Waste grants and TEP for the Fort McDermitt Paiute - Shoshone Tribe.
2003	Preparation of a water monitoring QAPP for the Elem Rancheria, Clearlake Oaks, CA.
2003	Preparation of a 305b Report for the Elem Rancheria including review of the Sulfur Bank Superfund Site Data, Clearlake Oaks, CA.
2002	Assistance with review of road and infrastructure planning, Bear River Band of Rohnerville Rancheria. Loleta, CA.
2002	Technical support for development of an Environmental Inventory and Tribal Environmental Plan for the Guidiville Band of Pomo Indians. Ukiah, CA.
2002	Removal of home heating oil tanks, Fort McDermitt Paiute - Shoshone Tribe Reservation.

2000-2002	Technical advisor for the Yerington Paiute Air Quality Program. Yerington, NV. Design and management of systems to monitor for PM_{10}, $PM_{2.5}$ and toxic emissions.
2000-2001	Improving water quality in the Carson River, Consultant for the University of Nevada, Reno for a subcontract to the Washoe Tribe of Nevada and California (USEPA 319 Grant).
2000-2001	Experimental design and statistical analysis of results for heavy metal determinations and Candida growth factors in human breast milk. For Health and Nutrition Inc. Reno, NV.
2000-2002	Development of a rural internet provider business model including application of wireless internet technology. For Plumasnet. Greenville, CA.
2000	Prioritizing environmental projects for the Ft. McDerrmitt Paiute and Shoshone Tribe (NV). Sites include mines/acid mine drainage, underground storage tanks and water quality issues.
2000	Assessment of a drinking water collection and distribution system for the Greenville Rancheria. Greenville, CA.
1999	Design for proposed facilities for onsite treatment of waste from lemon processing, Buenos Aires, Argentina. For Obrelmec (Division Ecologia).
1999	Design for proposed facilities for offsite treatment of photographic film development waste, Buenos Aires, Argentina. For Obrelmec (Division Ecologia).
1999	Evaluation of an electrolytic cell system for spa sanitation in conjunction with Dr. Dean Adams, University of Nevada, Reno, Department of Civil Engineering, for Bioquest Inc.
1993-1999	Production of specialty agar for plate counting PCP and Creosote tolerant bacteria. Included design and start-up of onsite laboratory, Weed, California, for JH Baxter Inc.
1998	Design and monitoring of onsite facilities for biodegradation of DDT contaminated soil, Santiago del Estero, Argentina. In conjunction with Obrelmec (Division Ecologia).
1996-1998	Production of specialty agar for plate counting PCP and Creosote tolerant bacteria. Included design and start-up of onsite laboratory, Lumby, British Columbia, Canada. For Bell Pole, Ltd.
1996-1997	Design of primary treatment systems for a combined industrial wastewater treatment system that included dye, petroleum and metals processing waste, Ahmedabad, India. For Envirocare.
1993	Design and testing of an insitu air venting system for treatment of PCP contaminated soil and water, Lake City, Florida. In conjunction with Wildmere Farms.
1993	Review of results and literature review for a three dimensional resistivity geophysical testing for creosote contamination. For the Hattiesburg, MS, School Board through representing attorney.
1993-1996	Design and operation of vented soil pile systems for treatment of PCP and PAH contaminated soil at an abandoned wood treating site, Lake City, Florida. In conjunction with Wildmere Farms.
1990-1992	Design and operation of landfarms for bioremediation of PCP contaminated soil at an abandoned wood treating site, Lake City, Florida. In conjunction with Wildmere Farms.
1989	Monitoring bioremediation system for soil contaminated with Dieldrin at various operating forest products facilities in Southern Arkansas. For Champion Lumber, Inc.

Participation in Professional Organizations and Seminars

- Professional Engineer (PE) Nevada 16257
- Certified Environmental Manager, State of Nevada, EM-1785
- Hazardous Waste Operations and Emergency Response Training (HAZWOPPER) in accordance with 29 CFR 1910.120. Truckee Meadow Community College, January 10-14, 2005. Updated January 2016
- ASTM Technical & Professional Training Course on Phase I-II ESAs, November 27-29, 2012 in Las Vegas, NV. Confined Space Entry Train-the-Trainer, Truckee Meadow Community College, July 27, 2005
- Order of the Engineer

- American Water Works Association
- Yerington Mine CERCLA Site Technical Working Group
- Sulphur Bank Mercury Mine Superfund Site Technical Working Group
- Lowery Landfill Superfund Site Technical Working Group
- *National Tribal Environmental Enforcement Conference*. April 30 – May 2, 2002. Reno, NV
- *Working effectively with Federal and State Agencies, A workshop for Tribal Council Members, Employees and Representatives* (Topics included Federal Indian Law and Consultation). August 8-11, 2000. Reno, Nevada. Sponsored by the Nevada Indian Environmental Coalition
- *Tribal Nonpoint Source Pollution Workshop*. July 24-25, 2000, Sparks, Nevada. Sponsored by Region 9 USEPA
- Reviewer for *Chemosphere*, 2000 - 2001
- *President. 1996.* Student Association of Environmental Engineers and Scientists, University of Nevada, Reno
- *Session Chair. 1994.* Environmental Issues/Remediation in the Wood Treating Industry. ACS (Industrial and Engineering Chemistry Division, Pollution Prevention and Waste Management Subdivision) Emerging Technologies for Hazardous Waste Management Symposium VI, Atlanta, Georgia
- *Session Chair. 1993.* Environmental Issues/Remediation in the Wood Treating Industry. ACS Emerging Technologies for Hazardous Waste Management Symposium V, Atlanta, Georgia

Publications and Presentations

McGinnis, B. Dietrick and Ginny Hatch. 2016. Groundwater, Water Rights, Superfund and the Yerington Paiute Tribe. Second Annual Tribal Summit, Native Waters on Arid Lands.

McGinnis, B. Dietrick. 2010. Linden Fields, a 50 MW Proposed Solar Farm Project. California Energy Commission Pre-filing Presentation.

McGinnis, B. Dietrick and E. Ringelberg. 2010. Restoring a Rare Native Fish, the Hitch *Lavinia exilicauda chi*: Biology, Ecology, and an Initial Adaptive Management Plan. The California Society for Ecological Restoration (SERCAL) 17th Annual Conference.

Lpsecor@gmail.com | (605) 743-4502 | Reno, NV

EDUCATION

University of Nevada, Reno **Graduated May 2019**

B.S. Ecohydrology – *In cursu honorum*

PROFESSIONAL EXPERIENCE

McGinnis and Associates **July 2021 – Present**

Environmental Specialist II

- Developed water resources technical reports and analyzed water quality data for tribes in northern and southern California, including studies on nitrate contamination in groundwater for rural communities.
- Designed and implemented an aerial mapping and survey program utilizing drones and terrestrial survey equipment; projects included wetlands mapping and erosion change detection in dynamic ephemeral systems.
- Conducted Phase I and II Environmental Site Assessments across Nevada and California, regularly interpreting groundwater gradients and potential contaminant transport.
- Co-managed EPA Brownfields programs for tribes in Nevada and California, including program development environmental assessments, and coordination with EPA.
- Provided extensive GIS support for the development of sampling location maps, high-resolution topographic data, watershed delineations, and land usage assessments.
- Supported alternative energy assessments for a northern California Tribe by conducting energy audits and evaluating the feasibility of solar and geothermal development on Tribal lands.
- Regularly interfaced with tribal, federal, state, and local partners, including US EPA, BIA, USACE, and NDEP.

Washoe Tribe of NV and CA, Environmental Department **August 2020 – July 2021**

Environmental Specialist II

- Participated in surface water quality sampling, benthic macroinvertebrate inventories, and air quality analysis.
- Assisted in groundwater research efforts at Meeks Meadow in the Lake Tahoe Basin, installing and maintaining piezometers for restoration studies.
- Helped write grant proposals for Tribal environmental projects including river restoration, invasive species control, wildfire resilience, and nonpoint source pollution reduction projects.

Carson Water Subconservancy District **June 2019 – August 2020**

Watershed Technician (AmeriCorps)

- Updated and assembled surface and groundwater data throughout rural communities in the watershed.
- Aided in river geomorphology surveys and aerial mapping using drones, survey equipment, and ArcGIS.
- Supported watershed outreach and education events, compiled seasonal newsletters, and assisted in coordinating events with tribal, state, and nonprofit environmental partners in Nevada and California.

Aquatic Ecosystems Analysis Laboratory, University of Nevada, Reno **January 2018 – June 2019**

Laboratory Research Technician

- Served as a summer laboratory technician at the Castle Lake Research Station in Mt. Shasta, CA, gathering data on water chemistry and drivers of biological productivity.
- Assisted laboratory graduate students with projects, including zooplankton research in Lake Tahoe and primary productivity experiments at high-altitude lakes in the Klamath Mountains.

USGS Nevada Water Science Center, Carson City, NV **September 2017 – April 2018**

Research Volunteer

- Gained experience in stream gaging, water quality analysis, equipment calibration, and surveying techniques.
- Assisted in groundwater fieldwork installing piezometers along the Truckee Canal to study seepage losses.

RECOGNITIONS / AWARDS

April 2018 – May 2019

Nevada Undergraduate Research Award / Honors Degree with Distinction Award

- Completed undergraduate thesis on Carson River metabolism modeling and oxygen isotope fractionation under the guidance of Dr. Sudeep Chandra and Dr. Flavia Tromboni.
- Presented undergraduate thesis poster at the Nevada Undergraduate Research Symposium and delivered a research seminar to department faculty and students as part of the award.

CERTIFICATIONS

- Certified Environmental Manager (CEM) in Nevada.
- FAA Part 107 Remote Pilot Certificate
- OSHA 40-hour HAZWOPER certification

PROFESSIONAL SKILLS

Water Quality Sampling	GIS and Remote Sensing	Grant and Report Writing
Groundwater Monitoring	Advanced Drone Mapping	Project Management
Environmental Policy	Terrestrial Survey Equipment	Data Entry and Organization
Ecological Restoration	Watershed Modeling	Microsoft Office Suite
